

Digital Camera Hire – DX8000G

While many digital cameras perform very well above water, no other compact digital camera can match the advantages the DX8000G has underwater. The reason the DX8000G is a better choice for the underwater photographer is that the DX8000G is the only digital compact camera designed specifically for underwater photographers.

The DX8000G camera and housing are designed to perform perfectly together. You only have to pick the DX8000G up to see the quality and thought that has gone into designing the best compact underwater system on the market.
